

Fragile Care. (How to maintain your scents)

Fragile Scents LLC wants to ensure you are taking care of your products and maintaining proper maintenance. Please read the below instructions for your safety.

1. *That first burn.*
 - *Be sure to burn your candle long enough to get that wax pool across the entire surface up to the sides. A good 2-3 hour burn will ensure this.*
2. *Trim Your Wick*
 - *Make sure your wicks are trimmed to ¼' each time you burn your candle. This will help prevent mushrooming that can cause soot. It will also help with the size of the flame keeping it at a normal burn flow.*
3. *Soot*
 - *Soot is that black ring that forms around your candle that no one likes. Keeping your wick trimmed and your candle free from the trimmings and debris from matches will help ensure this.*
4. *Don't Blow*
 - *When putting out your candle, you can place the top back on to suffocate the flame. This will help prevent the smoke from blowing back in your face. If by chance you have thrown your cap out, you can dip the wick in the melted wax and straighten it back out to prevent the unwanted smoke or hot wax splatter.*
5. *Storing you Candle*
 - *Store your candle in a cool, dark and dry place. Try to avoid placing your candle in direct sunlight.*
6. **IMPORTANCE**
 - *Keep Away from Children*
 - *Always burn your candle in plain sight. Do not leave left alone to burn.*
7. **WAX MELTS**
 - *Do Not Consume*
 - *Keep away from Children.*
 - *Keep your oil burner in a safe, sturdy place away from drafts and anything that is flammable.*
 - *Unplug or extinguish your oil container before leaving the room.*
 - *Re-use soy wax melts until there is no longer a scent released.*
